

## **User story**

As a product owner

I want a quiz program that has a graphical interface with options for each question so that users can get hints and enter correct answer and get scored on correctness.

### **Acceptance Criteria**

- Program should implement OOP paradigm.
- Display quiz questions in a graphical interface.
- GUI interface to make Quiz game interactive.
- Users can see the three options and select one of them.
- After selecting the right answer show another option.
- Or wrong answer provide answer with small introduction.
- After giving answer of all question clients will get score.
- Score display on window with correct answer.
