User story

As a product owner

I want a Quiz program that has a graphical interface with options for each Question so that user can get hints and enter correct answer and get scored on correctness.

Acceptance Criteria

- Program should implement OOP paradigm.
- Display quiz questions in a graphical interface.
- GUI interface to make Quiz game interactive.
- Users can see the four options and select one of them.
- After selecting the right answer user gets marks.
- wrong answer provide answer with small explanation.
- After giving answer of all question clients will get score on screen.
